- Streams & Rivers
- Lakes & Ponds
- High Value Forest Ecosystem Zones

Conservation Focus Areas
- Core Area
- Supporting Natural Landscape

A Conservation Focus Area is an area that is considered to be of exceptional significance for the protection of living resources and water quality. Each Conservation Focus Area is comprised of a Core Area that contains the essential natural resources for which the focus area was identified. Some also also include a Supporting Natural Landscape, which is comprised of natural lands that buffer and sometimes link core areas and help to maintain habitat and ecological processes.

High-value Forest Ecosystem Zones identify large areas of unfragmented forest. These zones, while typically dominated by forest, also include a variety of wetlands and water features that comprise healthy and productive ecosystems.
